

Pattern to capture data pairs

Copyright © 2017 Chandra Lingam

Write a pattern to match a data pair consisting of temperature followed by humidity

Temperature is made up of four digits or NNNN

Humidity is made up of three digits or NNN

The values should be captured in the named groups **temperature** and **humidity** respectively

For example:

0689029NNNN030

First match should be **0689029** and captured groups are:

temperature:0689

humidity:029

Second match should be **NNNN030** and captured groups are:

temperature>NNNN

humidity:030
