Pattern for Matching Row

Write a pattern to match and extract contents of a row (assume entire row is available in a single line).

A Row in a html is specified using "tr" element. **<tr>....row content...</tr>**

Row can also be empty. **<tr/>**

Row can also contain additional attributes. **<tr align=right>....row content </tr>**

Write a pattern that can match empty row or row content. If row content is available, it should be captured in a named group "**arow**"

For example, when given a text (it is a single line text):

```
<tr><th align="right">Test</th><th>Jun 22, 2014</th><th>Jul 19, 2012</th><th>Aug 13,
2011</th><th>Sep 07, 2010</th></tr>
```

It should match the above text and return a named group with the following text

arow:<th align="right">Test</th><th>Jun 22, 2014</th><th>Jul 19, 2012</th><th>Aug 13, 2011</th><th>Sep 07, 2010</th>
