Pattern for a header match

Write a pattern to capture **Source (Source) and Destination (Dest) Directories** from the header section. In this text,

```
-------------------------------------------------------------------------------

   ROBOCOPY     ::     Robust File Copy for Windows

-------------------------------------------------------------------------------

  Started : Sunday, May 1, 2016 1:59:16 PM

   Source : C:\RegularExpressionsWithDotNet\robocopytest\source\தமிழ்\हिन्दी\English

     Dest : C:\RegularExpressionsWithDotNet\robocopytest\destn\

    Files : *.*

  Options : *.* /BYTES /S /DCOPY:DA /COPY:DAT /NP /R:1000000 /W:30

-------------------------------------------------------------------------------
```

Named Group **type** should identify **Source** or **Destn**

Directory path needs to be captured in a named group **dir**

For example:

First Match

Source : C:\RegularExpressionsWithDotNet\robocopytest\source\தமிழ்\हिन्दी\English

Named Groups should capture

type:*Source*

dir:*C:\RegularExpressionsWithDotNet\robocopytest\source\தமிழ்\हिन्दी\English*

Second Match

```
Dest : C:\RegularExpressionsWithDotNet\robocopytest\destn\
```

Named Groups should capture

type:*Dest*

dir:*C:\RegularExpressionsWithDotNet\robocopytest\destn*
